

What is claimed is:

- 1 1. A method of controlling a combination washer drier, comprising steps of:
2 inputting an operational command;
3 performing washing and rinsing steps according to the operational command;
4 simultaneously performing a dewatering step and a first drying step after completion
5 of the watering and rinsing steps; and
6 performing a second drying step after completion of the dewatering step.

- 1 2. The method as claimed in claim 1, wherein a pump, a fan, a heater, and a
2 drum motor are driven during the first drying step.

- 1 3. The method as claimed in claim 1, wherein a pump, a fan, a heater, a drum
2 motor, and a supply valve are driven during the second drying step.
